

Convert this mock-up into a static HTML page.

The full-size image is available here:

 mock-up.jpg

Texts and images are available here:

[Texts & Images](#)

To build the page, use Bootstrap (v4.6.x), CSS (vanilla or SCSS) and JavaScript if needed.

[Introduction · Bootstrap v4.6](#)

Use as much as possible, Bootstrap variables, and SCSS maps.

[Theming Bootstrap · Bootstrap v4.6](#)

The final result should look correct on a viewport size  $\geq 992$ px.

It doesn't have to be a pixel-perfect copy.

Feel free to adapt the layout/design.

In the “Awards” section, the 5 boxes should be clickable with a hover effect.

The “Helpful answers” section contains an accordion. It should be fully functional.

Don't hesitate to Include comments and notes.  
What do you find good/bad in this mock-up? What would you improve?  
What would you change?

When you're done, publish your code on GitHub.

Happy coding :)
